

RESEARCH INTEREST

I'm a 4th-year integrated M.S./Ph.D. student at POSTECH. My research focuses on the **trust boundaries** of AI systems deployed in **real-world environments**, where assumptions made in controlled settings often break down across system interfaces, including inputs, outputs, and model weights. I study these failure modes under realistic threat models and design safeguards that reflect actual deployment conditions. My goal is to help establish a **zero-trust foundation** for reliable AI in real-world deployment.

EDUCATION

• POSTECH <i>Integrated M.S/Ph.D Student in Artificial Intelligence</i>	South Korea <i>2023-Present</i>
• Sungkyunkwan University <i>B.S. in Mathematics</i>	South Korea <i>2017-2023</i>

EXPERIENCES

• Research Internship <i>New York University</i>	USA <i>2025</i>
• Military Service <i>Korean Augmentation to the U.S. Army (KATUSA), 188th Military Police Company</i>	South Korea <i>2019-2021</i>
